Functions and methods

Functions and methods

#python

[python_bases/4_Methods_Functions at main · igijon/python_bases](#)

Proposed

Write a function that receives a single numeric parameter and returns the sum of the prime numbers from 0 to that number inclusive.

> 0 and 1 are not considered prime.

Proposed: Hanged

The program chooses a secret word and shows the user the dashes that correspond to the letters that the game will have.

On each attempt, the player will say a letter:

- If the letter is there, it will be displayed in the gaps instead of the dashes.
- If you are not there, you lose a life.

We will start from 6 lives and we will discount.

If the lives run out, the player loses.

If the word is guessed correctly, the player wins.
